

Fruit Fly Bully - Product Knowledge:

Active: Citric Acid, 100% Pure Castor Oil, Non-GMO Corn Oil

Inert: Oleic Acid, Diatomaceous Earth, Glycerol, water

How it works:

The Castor Oil and Corn oil are formulated together to coat the insect's spiracles through which they breathe and suffocate them.

A product with toxic chemicals only attacks the nervous system, poisoning the insects, and sometimes the eggs. When an insect fails to die from a chemical (because it takes large doses of chemical to kill an insect) it then starts to become immune to the chemicals.

With our product, we attack the respiratory system by suffocating the spiracles eliminating osmosis of oxygen. Meaning, an insect will never become immune to our all natural product unless they evolve and grow lungs.

Acting Agents:

- Citric Acid: Burns the membrane of the insect, exposing the membrane to the natural elements resulting in the insect's inevitable death.
- Diatomaceous Earth: Fossilized Single Cell organism, when applied to a surface area, act as microscopic razorblades to the insects, cutting the insects feet (Tarsus) and absorbing moisture from the insects. The exposure to the natural elements were the laceration occurred also kill the insect.

Stabilizing agent:

- Oleic Acid: The molecular bond of Oleic Acid binds together the other active ingredients.

What separates us from the competitors;

- Product does not stain and can be sprayed on multiple surface areas without concern.
- No immunity build-up from pest because of respiratory attack vs nervous system.
- Product contains continuous preventative from the Diatomaceous Earth.
- Our product is an ON-CONTACT kill.
- Human and pet consumption safe.
